PROFESSIONAL SUMMARY

Computer Science undergraduate (B.E., CGPA 9.20, expected 2028) with a remote Machine Learning internship and projects in machine learning and computer vision, plus Generative AI certification. Builds end-to-end pipelines from EDA, feature engineering and modeling to threshold tuning, SHAP explainability and Streamlit deployment. Seeking a Machine Learning internship to solve real-world, data-driven problems.

EDUCATION

Cambridge Institute of Technology, North Campus *Expected Graduation: 2028*
Bachelor of Engineering (B.E.), Computer Science & Engineering | CGPA: 9.20

EXPERIENCE

Machine Learning Intern (Remote) | Enerzcloud Innovations *25 Aug 2026 – 25 Sep 2026*

- Completed a structured Machine Learning training program as the first phase of a one-month remote internship.
- Applied the training by working on a hands-on ML project as part of the internship.

TECHNICAL SKILLS

Machine Learning & AI: Supervised Learning (Classification, Regression), Random Forest, XGBoost, Logistic Regression, Feature Engineering, Hyperparameter Tuning, Model Evaluation (Precision, Recall, F1, ROC-AUC), SHAP Explainability, Computer Vision, Generative AI (certification)
Libraries & Frameworks: Scikit-Learn, Pandas, NumPy, OpenCV, MediaPipe, Matplotlib, Seaborn, Streamlit
Languages & Databases: Python, SQL, C++, Java, MySQL, Relational Databases (RDBMS)
Developer Tools: Git, GitHub, VS Code, Jupyter Notebook, Google Colab

PROJECTS

AI Risk Manager – Fraud Detection System | ML & Streamlit github.com/Gayatri-tech24/ai-risk-manager-fraud-detector

- Built an end-to-end fraud detection pipeline on a Kaggle transaction dataset using Random Forest, Column Transformer, and stratified cross-validation on highly imbalanced data.
- Optimized the decision threshold using out-of-fold predictions, improving fraud recall from **62.8% (at 0.50) to 99.2% (at 0.20)** with an F1-score of **95.6%**; achieved **97% precision and 100% recall** on the held-out test set.
- Added SHAP explainability and false-positive cost analysis to identify transaction-level risk drivers and business impact.
- Deployed the trained pipeline as an interactive Streamlit app for transaction-level fraud probability and risk analysis.

CreditWise Loan Approval System | ML Classification github.com/Gayatri-tech24/Credit-Wise-Loan-Approval-System

- Built a loan approval classifier on a 1,000-record dataset: imputed missing values (~5%), encoded categoricals, scaled features, and used EDA to find Credit Score (+0.45) and DTI Ratio (-0.44) as top predictors.
- Compared Logistic Regression, KNN, and Naive Bayes; Logistic Regression performed best with **88.5% accuracy** and 85.2% precision.

Customer Churn Prediction | ML Classification, XGBoost kaggle.com/code/gayatrigundad/customer-churn

- Cleaned and analyzed a 100K-record synthetic telecom churn dataset (Kaggle): removed 265 invalid records with negative TotalCharges and one-hot encoded categorical features.
- EDA showed month-to-month customers churn at 46.5% vs ~16.7% on 1-2 year contracts; XGBoost feature importance confirmed contract type and tenure as the top churn drivers.
- Compared Logistic Regression, Random Forest, and XGBoost on a stratified split; XGBoost performed best with **76.2% accuracy**, an F1-score of 0.60, and a ROC-AUC of 0.81.

Computer Vision Projects | OpenCV & MediaPipe github.com/Gayatri-tech24

- Built a real-time hand gesture recognition system with OpenCV and MediaPipe Hands, tracking 21 hand landmarks and classifying gestures (fist, thumbs-up, pointing, peace sign, finger count).
- Developed an automated Coin Counter using OpenCV thresholding and contour detection.

CERTIFICATIONS

- **Quantium Data Analytics Simulation** – Forage (Jul 2026)
- **Gen AI Camp Certification** – View Certificate
- **Introduction to Data Structures** – Udemy (Dec 2025) | **Java Programming** – EdiGlobe, EGCC0096 (Oct 2025)
